SILPHIE KIT

SILPHIE KIT: COMPENSATOR ROLLER + VERTICAL CUTTING BLADES

To satisfy the demands of its customers, CAPELLO has introduced the SILPHIE KIT for the special harvesting of Silphie. The KIT consists of two vertical cutting blades and a compensator roller which accompanies the product inside the SPARTAN, guaranteeing a homogeneous flow.

The KIT can be fitted to any SPARTAN model.

Click on [SILPHIE KIT](#) to see it in action.

ADJUSTABLE COMPENSATOR ROLLER

The roller can be adjusted in height, directly from the driver's cab, by means of a hydraulic system and adjusted in length manually, without the use of tools.

VERTICAL CUTTING BLADES

The double blade cutting system guarantees a perfect cut even with intertwined products and in the presence of weeds. Movement is ensured by an oil-hydraulic system connected to the self-propelled harvester. When not in use, the blade is stored horizontally in the rest position and no tools are required for this operation.
